Create your Unified Health Card*

A unified health identifier for people or animals.

soschain.app

1

Create the card

It is the unified health identifier for a person or an animal. You can link other health identifiers to the card.

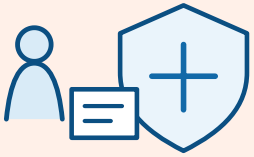

2

Your health index

It works like a book index: its links show where the real data is held. Verified organisations in the data space can update it.

3

Prepare your emergency information

Create information for yourself, a dependant or an animal. Fundación UNID's backup service lets you link it to your index.

Part of the **Global Data Care** data space

You stay in control

Clear permissions for verified professionals.

Choose where and for which roles

You authorise access by scope and for verified professional roles in the data space.

By country
and professional role

By organisation
and professional role

By professional email
and professional role

Why can you trust it?

Verified organisations are part of the data space. Each employer verifies its professionals and the roles they perform.

Your family can follow the care journey

When a person moves through the emergency department, tests or a ward, the service can update their journey. Authorised family members or related people can see where they are and what care they are receiving.

Three situations where SOSChain helps

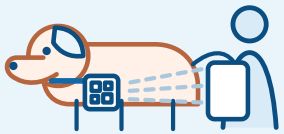

Information and contacts available when they are needed.

The person is unresponsive

A police officer or healthcare professional assists a person who is unresponsive or disoriented.

Using the SOSChain identifier, the professional can start a **private call to the person's emergency contacts**. Authorised clinical professionals can request their emergency information.

Only the animal's QR code is available

The person does not have their card, but the animal with them is wearing its SOSChain Quick Response (QR) code.

Using the animal's SOSChain QR code, emergency services can start a **private call** to authorised contacts without revealing phone numbers.

The family is waiting for news

A person has entered a medical service, and their family does not know where they are or what is happening.

Authorised people can follow their journey through the **emergency department, tests and ward** as the service updates it, and receive **messages and calls**.

Private calls: SOSChain connects the call without displaying the personal phone number of either the caller or the contact.
